

Use your regular Electricity plug for networking and keep your office and home neat and tidy

# HomePlug

knowledge sheet

## Easy Network Connection –

# Over Standard Electricity cabling

## HomePlug “data over mains” Explained...

\* **Create a complete home network using existing electrical cabling** found in any home or business simply plug the Dynamode HomePlug certified product into **any electrical wall outlet** and your connected!

\* The Dynamode PowerLine Series is completely **HomePlug 1.0 certified** meaning that our products are totally compatible with other HomePlug certified devices from the likes of Devlo® and SMC® - **look at for the 'HomePlug Logo'**

\* **No need for software Driver installation. Get up and running in seconds with our PowerLine series** simply plug in the Ethernet or USB PowerLine adapter and the **onboard status LEDs** tell you if your connected or not it's **totally software transparent** so no matter if your **Browsing the Internet, Printing some Word documents or playing online Gaming over your Broadband connection** it works in seconds and it's quick too

\* Our Dynamode PowerLine Series works up to **14Mbps** which is faster than the Wireless 802.11b standard, plus it gives a **constant 14Mbps connection, unlike Wireless which rarely makes the suggested speeds**

\* **A great alternative to Wireless Networks.** Achieve the speeds you need, no matter what sort of layout of your House or office **our combined PowerLine ADSL Router is real alternative to Wireless ADSL Router bundles**

\* **Work Safe full data encryption is employed** to keep your data safe and thus **allowing multiple HomePlug products with specific access rights** and it's easy to setup too!
