

# PHONAPART™

## Voice Over Internet **USB PHONE**

Make **FREE** Computer to Computer calls using the latest software available on the internet. Also make International calls to landline phones at ultra cheap rates. A great alternative to standard fixed landline based telephony. Just plug into your USB port!

The Internet phone sends the call over your domestic Broadband connection and so bypasses your land based Telecoms provider. For callers and receivers using the same internet based software, Computer to Computer internet calls are **FREE** anywhere in the world. Worldwide calls to landlines can be made at a very low cost, pretty much like local rates by subscribing to the internet based Telecoms companies.

### **REQUIRES ADSL/BROADBAND CONNECTION.**

- supports Skype and also SJ-Phone, X-lite, MSN and Net2Phone
- supports Windows 2000 and XP
- supports USB 2.0
- CD driver is included but main software must be obtained from the Internet Telephony software provider. Usually this is downloaded very easily from the internet.

### **features**

- Key-pad function
- Hook switch function
- USB Plug
- Ringer function
- Mute function

Design maybe subject to change.

**USB Plug**

**Key-pad dialling**

**CD Driver, easy to install**

#### **Trade Marks**

\*Please note that the trade marks are the property of the rightful owners who do not give endorsement to this product. They are used solely for informational purposes so the customer knows which systems the phone will work with.

#### **Not SIP compatible**

Some advertised internet phone software (not mentioned here) use SIP (Session Initiated Protocol) software. This Phone will not work properly with these systems. Our telephone was designed to work primarily with Skype and similar proprietary software.
